DVD **MovieFactory**™**2**

Easily Make DVDs Just Like the Pros

What's New

DVD MovieFactory 2 is unique in the consumer DVD creation category for having the most advanced Disc-Direct™capture and disc re-editing technology available. You can effortlessly burn video directly from a camcorder to a DVD, then share, retrieve or re-edit media on that disc. It has more ready-to-go templates that can be customized to create exciting interactive scene selection menus. DVD MovieFactory 2 also creates high-quality digital image slideshows and accepts DVD-ROM data, perfect for businesses and home users who want to include documents and archival media along with DVD videos and slideshows.

NEW! Video Import & Editing Features

Disc-Direct™ – The fastest way from DV to DVD. Pick a menu template and DVD MovieFactory will do the rest — capture, create menus, and burn.

MPEG-Direct™ capture – Save conversion time and disk space by capturing directly to DVD-ready MPEG format.

Multi-trim – Remove multiple unwanted sections of a video clip. Easily delete commercials from captured TV programs.

VOB and DAT file import – Import video from home-produced DVDs (VOB file format) or VCDs (DAT file format) for further editing.

LPCM audio support – Author DVD titles with uncompressed LPCM (Linear PCM) audio for high-quality sound and broader set-top player support.

DVD-VR support – Import and edit video from DVD-VR formatted discs used with DVD-RAM set-top recorders and camcorders.

NEW! Menu Creation & Authoring Tools

'All-in-one' interface – Conveniently move from capture, to author, to burn — all from within one interface.

Photo slideshows – Create instant slideshows from your favorite images and audio. Make DVDs with video AND still shots.

On-disc editing – Re-edit DVDs you've already burned with DVD MovieFactory! Change/edit menu items or MPEG movies right on the disc (DVD+RW discs only).

Automatic chapter points — Automatically create chapter points based on DV tape stops and starts. Set chapters based on time intervals (i.e. every 3 min.)

Menu layout customization – Select the layout that fits your needs – 2, 4 or 6 thumbnails per menu. Save customized menu layouts for future use.

Improved menu captioning – Choose the font, color and size of your liking for thumbnail caption text and menu headings.

Customizable menu thumbnail frames - Change the look and feel of your menus by switching chapter thumbnail frames.

Project size preview – Check out disc space requirements before burning.

NEW! Burning Features & Support

MPEG.Now™ encoding – Performance-enhanced video compression engine (MPEG codec) produces files that look great when burned to disc and played back on TV.

Automatic transcoding – Build menus first, convert later. Start with AVI and QuickTime files and let DVD MovieFactory convert them during output for a one-step output process.

DVD+R support – DVD+R support has been added to existing support for DVD+RW and DVD-R/RW for the widest compatibility.

Output presets –Use MPEG templates to take the guess work out of encoding videos.

Save projects on disc – Save DVD MovieFactory projects onto the same disc that you put your movies on for convenient future editing.

Disc-to-disc copies – Easily make more copies of your home-produced DVDs/VCDs from an existing disc.

Include ROM data on disc – Add any data — Word documents, archived pictures, PowerPoint, PDFs, etc. to DVD video discs.

Improved burning performance – Save time and hard disk space by writing directly to CD/DVD (no temporary disc image is created on the hard drive.).
